

3.3 Execution Guide

Document 3.3 — Step-by-Step Execution Guide

Project: Hospital Appointment Management System **Platform:** ServiceNow (Scoped Application) **Application Scope:** x_2065601_hospit_0 **Phase:** Project Development — End-User Guide

1. Accessing the Portal

The Hospital Appointment Management System is accessed through the custom Service Portal built on the hospital_booking widget. The portal is reached using a URL pattern in the following form, replacing <instance> with your ServiceNow instance name:

`https://<instance>.service-now.com/hospital_booking`

On loading, users land on the **Home** tab, from which they can navigate to Patient Registration, Patient Booking & History, Doctor Registration, Doctor Queue & Slots, Front Desk/Admin, and Waitlist tabs depending on their role.

2. Patient Workflow

2.1 Patient Registration

1. From the Home tab, select the **Patient Registration** tab.
2. Enter the required details: patient name, age, blood group, phone number, city, address, and primary issue.
3. Click **Register**. A confirmation message appears once the record is saved.
4. The new record is created in the Patient table (x_2065601_hospit_0_patient) and is now available for booking.

2.2 Booking an Appointment

1. Select the **Patient Booking & History** tab.
2. Choose a doctor from the list (filter by specialization if needed).
3. Select a date to view that doctor's real-time available slots.
4. Choose an open slot and click **Book Appointment**.
5. Enter the reason for visit when prompted.
6. Confirm the booking. The system performs an atomic transaction that marks the slot as "Booked" and creates the corresponding Appointment record in a single step, preventing double-booking.
7. A confirmation message displays the appointment details.

2.3 Viewing Appointment History

1. From the **Patient Booking & History** tab, scroll to the **History** section.
2. All past and upcoming appointments linked to the patient's profile are listed, along with their current state (Booked, Checked-In, Completed, Cancelled, No-Show).

2.4 Cancelling an Appointment

1. In the **Patient Booking & History** tab, locate the upcoming appointment to cancel.
 2. Click **Cancel Appointment**.
 3. Confirm the cancellation when prompted.
 4. The appointment state updates to "Cancelled," and the associated slot reverts to "Available." If any patients are on the waitlist for that doctor/date, the system automatically checks and promotes the next eligible patient.
-

3. Doctor Workflow

3.1 Doctor Registration

1. Select the **Doctor Registration** tab.

2. Enter specialization, qualification, maximum patients per day, shift, consultation fee, and default slot duration.
3. Confirm the linked ServiceNow user account (sys_user reference).
4. Click **Register**. The new record is created in the Doctor table (x_2065601_hospit_0_doctor).

3.2 Adding Availability Slots

1. Select the **Doctor Queue & Slots** tab.
2. Click **Add Availability**.
3. Choose a date, start time, and end time for the slot (or a recurring range, if entering multiple slots).
4. Click **Save**. The new slot appears with status “Available” and becomes immediately visible to patients browsing that doctor’s schedule.

3.3 Managing the Daily Queue

1. In the **Doctor Queue & Slots** tab, select the current date to view today’s queue, sorted by appointment time.
2. When a patient arrives, click **Check-In** next to their appointment.
3. After the consultation, click **Complete** to close out the appointment.
4. If a patient does not arrive for their scheduled slot, click **No-Show**. This frees the slot and automatically checks the waitlist for promotion, the same as a cancellation.

4. Front Desk / Admin Workflow

4.1 Manual Walk-In Booking

1. Select the **Front Desk/Admin** tab.
2. If the walk-in patient does not already have a profile, register them using the same fields as the Patient Registration flow.
3. Select the desired doctor and date to view available slots across all doctors in one consolidated view.
4. Choose an open slot and click **Book for Patient**.
5. Enter the reason for visit and confirm. The appointment is created using the same atomic booking transaction used in the patient-facing flow, ensuring consistency and preventing conflicts with online bookings.

5. Troubleshooting

Issue	Likely Cause	Resolution
No slots showing for a doctor on a given date	The doctor has not added availability for that date	Ask the doctor to add slots via the Doctor Queue & Slots tab, or select a different date
Booking fails with “slot no longer available”	Another patient booked the same slot moments earlier	Refresh the slot list and select a different available slot
Cancelled appointment still shows as “Booked” in the portal	Portal view was not refreshed after the cancellation action	Manually refresh the Booking & History tab; the underlying Appointment record is updated immediately in the backend
Waitlisted patient was not promoted after a cancellation	The cancelled slot may not match the waitlisted patient’s preferred date/doctor combination	Verify the waitlist entry’s preferred date and doctor against the freed slot in the Waitlist table
Front Desk cannot see a doctor’s slots	The doctor profile or slots may not yet be linked/created correctly	Verify the Doctor record exists and has at least one Doctor Availability Slot record for the selected date
Patient registration form will not submit	A required field (e.g., phone number) was left blank	Check that all mandatory fields are completed before clicking Register
