

DOCUMENT 1.3 — EMPATHY MAP CANVAS

Folder 1: Ideation Phase | ServiceNow Capstone Project Submission

Project Title: Hospital Appointment Management System

Platform: ServiceNow (Scoped Application)

Application Scope: x_2065601_hospit_0

Author / Student: Santhosh Akkiseti

Primary Persona Profile

Persona: Outpatient / Healthcare Consumer (Patient)

Target User: An individual seeking non-emergency clinical consultation with a specialist doctor, requiring predictable scheduling and real-time confirmation.

Empathy Map Canvas

1. SAYS (Out Loud)

- "Why is the hospital phone line busy for 20 minutes straight?"
- "I wish I could see which specialist doctors are available today before driving down."
- "Can I get immediate confirmation for my appointment slot without waiting in line?"
- "If someone cancels their appointment, why can't I automatically get that open slot?"
- "I hope the doctor isn't delayed or running hours behind schedule today."

2. THINKS (Internal Monologue)

- "Taking half a day off work for a 15-minute consultation feels incredibly inefficient."
- "The front desk staff look too overwhelmed to accurately manage walk-in schedules."
- "I'm worried my preferred doctor's daily quota will fill up before I reach the counter."
- "There has to be a better way to check slot availability online from my phone."
- "If I cancel, will the hospital keep a record or penalize my future booking requests?"

3. DOES (Observable Actions)

- Calls the hospital reception repeatedly early in the morning to secure a doctor slot.
- Travels directly to the hospital as a walk-in patient hoping to find an open consultation gap.
- Waits in physically crowded OPD reception lines for long periods to register and check in.
- Continuously checks paper tokens or digital displays to monitor their turn in the queue.
- Gives up on scheduling when phone lines fail and postpones necessary medical visits.

4. FEELS (Emotional States)

- **Anxious:** Unsure whether they will get to consult the specialist on their preferred date.
- **Frustrated:** Annoyed by phone busy signals and lack of online scheduling transparency.
- **Helpless:** Unable to secure vacated slots when other patients cancel at the last minute.
- **Exhausted:** Fatigued by long waiting times in hospital waiting rooms.
- **Relieved:** Delighted when an instant, confirmed booking receipt is provided.

5. PAINS (Frustrations & Risks)

- Lack of real-time visibility into active doctor availability slots and daily shifts.

6. GAINS (Wants & Success Measures)

- A clean, 24/7 web portal to register profile details and select real-time doctor slots.

- Frequent occurrence of double-bookings or lost registration details due to manual tracking.
- Wasted time and travel expenses caused by unannounced doctor shift changes or full quotas.
- Inability to join a structured waitlist when all preferred doctor slots are currently booked.
- Complex, non-transparent booking processes requiring multiple phone inquiries or visits.

- Instant atomic booking confirmation that guarantees their selected time slot.
- Automated waitlist promotion that reallocates cancelled slots to waiting patients instantly.
- Clear visibility into historical and upcoming appointments in a personal portal view.
- A seamless, stress-free hospital intake process from booking to consultation.
