

# DOCUMENT 3.1 — SCHEMA & TABLE DEFINITIONS

Folder 3: Data Model & Security Construction Phase | ServiceNow Capstone Project Submission

**Project Title:** Hospital Appointment Management System  
**Platform:** ServiceNow (Scoped Application)

**Application Scope:** x\_2065601\_hospit\_0  
**Author / Student:** Santhosh Akkiseti

## 1. Overview of Data Architecture

The database layer for the **Hospital Appointment Management System** is engineered directly inside application scope `x_2065601_hospit_0`. To ensure modular encapsulation, relational consistency, and optimal indexing, the core model consists of five custom tables equipped with auto-numbering, strict display values, choices, and cross-table reference fields.

## 2. Comprehensive Data Schema Dictionary

### 2.1. Patient Table ( `x_2065601_hospit_0_patient` )

| Column Label  | Element (Name)      | Data Type    | Reference / Details                                          | Display    |
|---------------|---------------------|--------------|--------------------------------------------------------------|------------|
| Number        | <code>number</code> | String       | Auto-numbered (Prefix: <code>PAT</code> , Digits: 7)         | No         |
| Full Name     | <code>name</code>   | String (100) | Mandatory Patient Full Name                                  | <b>Yes</b> |
| Email Address | <code>email</code>  | String (100) | Patient Contact Email                                        | No         |
| Phone Number  | <code>phone</code>  | String (20)  | Contact Mobile/Landline                                      | No         |
| Age           | <code>age</code>    | Integer      | Patient Age in Years                                         | No         |
| Gender        | <code>gender</code> | Choice       | <code>Male</code> , <code>Female</code> , <code>Other</code> | No         |

### 2.2. Doctor Table ( `x_2065601_hospit_0_doctor` )

| Column Label    | Element (Name)              | Data Type    | Reference / Details                                                                                                          | Display    |
|-----------------|-----------------------------|--------------|------------------------------------------------------------------------------------------------------------------------------|------------|
| Number          | <code>number</code>         | String       | Auto-numbered (Prefix: <code>DOC</code> , Digits: 7)                                                                         | No         |
| Doctor Name     | <code>name</code>           | String (100) | Doctor Full Name                                                                                                             | <b>Yes</b> |
| Specialization  | <code>specialization</code> | Choice       | <code>Cardiology</code> , <code>Neurology</code> , <code>Pediatrics</code> , <code>Orthopedics</code> , <code>General</code> | No         |
| Department      | <code>department</code>     | String (100) | Hospital Organizational Department                                                                                           | No         |
| Sys User Record | <code>sys_user</code>       | Reference    | Foreign key to platform <code>sys_user</code> table                                                                          | No         |

2.3. Doctor Slot Table ( x\_2065601\_hospit\_0\_doctor\_slot )

| Column Label | Element (Name) | Data Type   | Reference / Details                        | Display |
|--------------|----------------|-------------|--------------------------------------------|---------|
| Number       | number         | String      | Auto-numbered (Prefix: SLT , Digits: 7)    | Yes     |
| Doctor       | doctor         | Reference   | FK to x_2065601_hospit_0_doctor            | No      |
| Slot Date    | slot_date      | Date        | Scheduled Consultation Date                | No      |
| Start Time   | start_time     | String/Time | Slot Start Time (e.g., 09:00:00 )          | No      |
| End Time     | end_time       | String/Time | Slot End Time (e.g., 09:30:00 )            | No      |
| Status       | status         | Choice      | Available , Booked , Completed , Cancelled | No      |

2.4. Appointment Table ( x\_2065601\_hospit\_0\_appointment )

| Column Label     | Element (Name)   | Data Type | Reference / Details                                   | Display |
|------------------|------------------|-----------|-------------------------------------------------------|---------|
| Number           | number           | String    | Auto-numbered (Prefix: APT , Digits: 7)               | Yes     |
| Patient          | patient          | Reference | FK to x_2065601_hospit_0_patient                      | No      |
| Doctor           | doctor           | Reference | FK to x_2065601_hospit_0_doctor                       | No      |
| Slot             | slot             | Reference | FK to x_2065601_hospit_0_doctor_slot                  | No      |
| Appointment Date | appointment_date | Date      | Calculated from Slot Date                             | No      |
| Status           | status           | Choice    | Booked , Checked-In , Completed , Cancelled , No-Show | No      |

2.5. Waitlist Table ( x\_2065601\_hospit\_0\_waitlist )

| Column Label   | Element (Name) | Data Type | Reference / Details                     | Display |
|----------------|----------------|-----------|-----------------------------------------|---------|
| Number         | number         | String    | Auto-numbered (Prefix: WTL , Digits: 7) | Yes     |
| Patient        | patient        | Reference | FK to x_2065601_hospit_0_patient        | No      |
| Doctor         | doctor         | Reference | FK to x_2065601_hospit_0_doctor         | No      |
| Slot           | slot           | Reference | FK to x_2065601_hospit_0_doctor_slot    | No      |
| Priority Order | priority_order | Integer   | FIFO Priority Rank (1 = First in queue) | No      |
| Status         | status         | Choice    | Waiting , Promoted , Cancelled          | No      |

**Schema Integrity Enforcement:**  
All reference fields maintain cascading integrity checks. Application scope boundaries prevent direct external modification to schema fields without explicit cross-scope privilege approval.
